

# DONATE **Contrib-** Give to a fabulous cause

December 2010

Contribute to keeping Keepers of the Waters alive! We have been an influential force for water consciousness, planning and design for living systems for over 19 years. Our ideas are spreading and now, more than ever, is the time to continue supporting us.

In the past year I have interacted with communities from Fitzwilliam, New Hampshire, to Milwaukee, Wisconsin and Stuart, Florida, to Anlong Village, Sichuan, and untold villages and monasteries in Western China and many places in between.

Worldwide, [keepersofthewaters.org](http://keepersofthewaters.org) has inspired numerous individuals and communities to start their own project, and often we are asked for advice and consultation. Our work is making a difference, and we need to continue full speed ahead in this time of great change.

Following any presentation on my work, the biggest question I am asked is "What is the next step in restoring living systems from backyards and cityscapes to large rivers and water bodies?" This has led me to initiate "Citizens for Living Systems," a concept for the organization of small groups to assist each other in creating practical solutions in their own yard or community. Let's teach each other.

The quality of water equals the quality of life, and we are just beginning to understand how exactly true that is. Its value is immeasurable – quality water is essential for all of life on this planet. Our bodies, our lives and the future of our planet depend on "living water" in a healthy "living system".

All funds go towards our projects or to sustain our website. Since our administrative costs are very low, every dollar makes a difference! We deeply appreciate your continued support.

*Betsy Damon*
